Intelligence
TECHNOLOGY

Telemedicine allows health care professionals to evaluate, diagnose and treat patients at a distance using telecommunications technology. The approach has been through a striking evolution in the last decade and it is becoming an increasingly important part of the American healthcare infrastructure.

TELEMEDICINE & TELEHEALTH

Telemedicine Benefits

Using telemedicine as an alternative to in-person visits has a host of benefits for patients and providers alike.

Patients enjoy:

- Less time away from work
- No travel expenses or time
- Less interference with child or elder care responsibilities
- Privacy
- No exposure to other potentially contagious patients

Providers enjoy:

- Increased revenue
- Improved office efficiency
- An answer to the competitive threat of retail health clinics and on-line only providers
- Better patient follow through and improved health outcomes
- Fewer missed appointments and cancellations
- Private payer reimbursement

MIXED REALITY : VR + AR

+ MR
Virtual reality (VR), augmented reality (AR) and mixed reality (MR) are emerging technologies utilizing a variety of digital (artificial) immersion and overlays on the real world that users can interact with.

FDA Approves Robotic Prosthesis Controlled by Muscle Contractions

In a major advance in mind-controlled prosthetics for amputees, University of Michigan researchers have tapped faint, latent signals from arm nerves and amplified them to enable real-time, intuitive, finger-level control of a robotic hand.

Elon Musk demonstrated his startup

Neuralink's technology to build a digital link between brains and computers.

Neuralink communicates with brain cells with 1,024 thin electrodes that penetrate the outer layer of the brain. Then there's a Bluetooth link to an outside computing device, though the company is looking at other radio technology it can use to dramatically increase the number of data links.
